

We claim:

1. A disposable absorbent article for the absorption and containment of urine or other body exudates, the disposable absorbent article comprising:
 - 5 a. a liquid impervious backing sheet;
 - b. a liquid pervious bodyside liner; and
 - c. an absorbent material disposed between the liquid pervious bodyside liner and the liquid impervious backing sheetwherein at least a portion of the disposable absorbent article has a fecal fluid
10 intake rate of greater than about 1.3 cubic centimeters per second as measured by the Fecal Fluid Intake Test.
2. The disposable absorbent article of Claim 1 wherein at least a portion of the disposable absorbent article has a fecal fluid intake rate of at least about 1.4 cubic
15 centimeters per second as measured by the Fecal Fluid Intake Test.
3. The disposable absorbent article of Claim 1 wherein at least a portion of the disposable absorbent article has a fecal fluid intake rate of at least about 1.5 cubic
20 centimeters per second as measured by the Fecal Fluid Intake Test.
4. The disposable absorbent article of Claim 1 wherein at least a portion of the disposable absorbent article has a fecal fluid intake rate of at least about 1.8 cubic
centimeters per second as measured by the Fecal Fluid Intake Test.
- 25 5. The disposable absorbent article of Claim 1 wherein at least a portion of the disposable absorbent article has a fecal fluid intake rate of at least about 2 cubic
centimeters per second as measured by the Fecal Fluid Intake Test.
6. The disposable absorbent article of Claim 1 wherein at least a portion of the
30 disposable absorbent article has a fecal fluid intake rate of at least about 2.5 cubic
centimeters per second as measured by the Fecal Fluid Intake Test.

7. The disposable absorbent article of Claim 1 wherein at least a portion of the liquid pervious bodyside liner has a air permeability of greater than about 3000 cubic feet per minute as measured by ASTM D 737-96 at 125 Pascals.

5 8. The disposable absorbent article of Claim 1 wherein at least a portion of the liquid pervious bodyside liner comprises a plurality of pores having at least one dimension greater than about 0.25 millimeters wherein the total open area of the plurality of pores comprises greater than about 30 percent of the total surface area of the liquid pervious bodyside liner.

10 9. The disposable absorbent article of Claim 1 wherein at least a portion of the liquid pervious bodyside liner comprises a plurality of pores having an open area of at least about 0.5 square millimeters and the total open area of the plurality of pores comprise greater than about 30 percent of the total surface area of the liquid pervious
15 bodyside liner.

10. The disposable absorbent article of Claim 1 wherein at least a portion of the liquid pervious bodyside liner comprises at least one topographical feature having a height of greater than about 2.5 millimeters.

20 11. The disposable absorbent article of Claim 1 wherein at least a portion of the liquid pervious bodyside liner comprises a plurality of topographical feature having heights of greater than about 5 millimeters.

25 12. The disposable absorbent article of Claim 1 wherein at least a portion of the disposable absorbent article is characterized by a flowback of less than about 0.053 grams as measured by the Fecal Fluid Flowback Test.

30 13. The disposable absorbent article of Claim 1 wherein at least a portion of the disposable absorbent article is characterized by a flowback of less than about 0.052 grams as measured by the Fecal Fluid Flowback Test.

14. The disposable absorbent article of Claim 1 wherein at least a portion of the disposable absorbent article is characterized by a flowback of less than about 0.051 grams as measured by the Fecal Fluid Flowback Test.
- 5 15. The disposable absorbent article of Claim 1 wherein the percentage of surface area of the portion of bodyside liner that contacts a flat surface at 0.3450 kPa (P_f) load is less than about 40 percent of the area of the bodyside liner.
- 10 16. The disposable absorbent article of Claim 1 wherein the percentage of surface area of the portion of bodyside liner that contacts a flat surface at 0.3450 kPa load is less than about 30 percent of the bodyside liner.
- 15 17. The disposable absorbent article of Claim 1 wherein the percentage of surface area of the portion of bodyside liner that contacts a flat surface at 0.3450 kPa load is less than about 25 percent of the area of the bodyside liner.
18. The disposable absorbent article of Claim 1 wherein the disposable absorbent article is a diaper, an adult incontinence article, or a training pant.
- 20 19. A diaper having a fecal fluid intake rate of greater than about 1.4 cubic centimeters per second as measured by the Fecal Fluid Intake Test and a TEWL value of less than about 17 grams per square meter per hour as measured by the Skin Hydration Test.
- 25 20. The diaper of Claim 19 having a fecal fluid intake rate of greater than about 1.8 cubic centimeters per second as measured by the Fecal Fluid Intake Test and a flowback of less than about 0.053 grams as measured by the Fecal Fluid Flowback Test.
- 30 21. The diaper of Claim 19 having a TEWL less than about 16 grams per square meter per hour as measured by the Skin Hydration Test.
22. A diaper of Claim 19 having a TEWL less than about 15.5 grams per square meter per hour as measured by the Skin Hydration Test.
